The leading manufacturer of injection molds and IML systems

Locations: 6
Employees: 330

Brink Business Segments

Dedicated production
of molds

Technology driven
Automated Systems

Brink's view on Market Info 2018-2019 Plastics Industry

The outlook for the plastics industry are good. The total industry can benefit from sales growth.

Mainly the German, British, American and Asian markets are promising.

In addition the strongly European export-oriented sector (exported 60% of sales) will benefit from the low level of the euro and the relatively low raw material prices (as a result of the low oil price).

It is expected that the plastics industry in 2018 has a worldwide production increase of approximately 3.5% compared to 2017.

Market Specialist

Food
Industry

With our dedicated mold's you can produce thin wall plastic food containers which are:
